Huntsville Airport 5 Year A/E Services Contract

Unnamed Aerial Vehicle (UAV) Hangar & Runway

EDT has a proven history of developing long-term and sustainable aviation design solutions for diverse markets, from large international airports (Hartsfield-Jackson International Airport) to military bases and Unmanned Aircraft Vehicles (UVA, Camp Mackall, NC)

EDT's experience in aviation engineering design has been developed through our work as a prime providing engineering services and also as consultant to some of the world's leading aviation architects. Projects include planning and designing world-class terminals, transportation facilities and providing management services. This experience has provided us with both insight and knowledge of the challenges of aviation design. Our work in both civilian and military aviation facilities is based on written FAA standards. These published standards guide engineering, design and construction for airports, heliports and seaplane bases. This includes airfield pavement, airport lighting, marking, signage and other visual aids, safety during construction, surveying and GIS data, deicing, aircraft rescue, firefighting (ARFF) and other facilities. Select projects include:

- UAV Hangar and Runway | MQ-1C Gray Eagle, Camp Mackall, NC
- A380 Gate F3 Reconfiguration | Atlanta, GA
- Hartsfield-Jackson Airport USO Space Configuration Upgrade | Atlanta, GA
- Huntsville International Airport 5 Year A/E Services Contract | Huntsville, AL
- Maynard H. Jackson International Terminal Parking Deck | Atlanta, GA
