EDT-THA Architecture and Engineering Design Technologies Huntsville is an open studio environment of architects and engineers, providing a collaborative platform throughout the design process. This teaming approach reduces change orders, costs and delivers higher levels of client fulfillment on-time and on-budget. The Huntsville A/E team uses the latest Building Information Modeling (BIM) software, enabling our design professionals to work jointly using one coherent system of computer models rather than separate sets of drawings. This essentially “brings the project to life” for clients with interior/exterior visual experiences of our models. This visualization tool is utilized early in the design process and contributes greatly to both Quality Control and Quality Assurance prior to construction by merging architecture and engineering models in a 3-D environment.

Recent projects completed in Huntsville include education, aviation, government, commercial, hospitality, medical, multi-family residential, large-scale city urban revitalization and master planning, sustainable and renewable energy design, interior design and project management. Our Renewable Energy group is also located in the Huntsville Office and consults for solar, wind, geothermal and building energy management.
