Engineering Design Technologies Mid-Atlantic Branch is conveniently located between Washington, D.C. and Baltimore City, placing us in a strategically advantageous geographical location. With I-95 connecting the corridor and BWI International Airport located directly across the street from EDT's office, we have access to one of the most sought after commercial real estate hubs in the nation. National government institutions including NSA and The Pentagon have opportunities through GSA for EDT to expand their base of clientele, in addition to the District and Baltimore's need for energy and utility programs. EDT's Mid-Atlantic presence has caught the eye of numerous institutions since its inception. EDT is being contacted more and more by sources with an interest and need for our services, especially corrosion engineering.

Since the launch of our Mid-Atlantic branch in January 2017, EDT has procured contracts with such notable clients as the City of Baltimore, DC Water & Sewer Authority (DC WSA) and Washington Suburban Sanitation Commission (WSSC). These clients are among the largest providers of environmental engineering and corrosion engineering services in the Baltimore/Washington Metropolitan area. EDT's diligent effort to build this solid foundation of relationships has proven fruitful.
