---

Engineering Design Technologies, Inc. (EDT) provided professional structural and civil engineering services for the 911 Emergency Center and Police Headquarters in Clayton County, Georgia. The police and 911 center portion of the building was constructed utilizing structural steel, while CMU load bearing walls and a one-way flat slab roof system was utilized for the jail segment.

The unique combination of structural design elements required a variety of materials to be used to achieve the desired architectural objective. The facility achieved the overall goal of enhancing the county's emergency response capabilities and functions.
