

Emory University Faculty Building Atlanta, Georgia

Client Emory University
Mike Morris
404.727.7486

Scope Civil Engineering
Structural Engineering

Project Value \$10 Million

Engineering Design Technologies, Inc. (EDT) provided civil and structural engineering design services for the Faculty Building for Emory University. The site is located at a busy intersection across from Grady Memorial Hospital in downtown Atlanta. EDT worked with closely with city officials to permit the very challenging and restricted site.

The structural elements of the building consisted of cast-in-place concrete columns. Height restrictions caused EDT to utilize post-tension flat slabs and a combination of shear walls and movement resistant frames for lateral stability.
