

Fulton County Medical Examiner's Laboratory

Atlanta, Georgia

Client	Kajima/Curry Mike Talent 404.812.8600
Scope	Mechanical Engineering Electrical Engineering Plumbing Civil Engineering Design
Contract Value	\$6.6Million

EDT provided Civil, HVAC, Plumbing and Electrical engineering services on the design build program of the new Fulton County Medical Examiner's Laboratory. This undertaking required EDT's Director of Mechanical Engineering to utilize past experiences with similar projects to provide a safe environment for the work force and the surrounding community.

With the extensive use of chemicals and the nature of the facility, proper ventilation was a key element in the engineering design. The design required no re-circulation of air to be allowed into the system. A strict process of air being sucked through the HVAC system and exiting through an elaborate filtration system protected the occupants of the building and individuals in the surrounding neighborhood. The exhaust process was especially strict in relation to the decomposition laboratories.
