Oak Street Streetscape, City of Roswell

Engineering Design Technologies (EDT) was created with the mission of redefining engineering practices to better respond in the rapidly changing market and the evolving needs of clients. With a goal of total performance and superior quality control/quality assurance, EDT quickly expanded its practice to provide fully-integrated design-build services, adding architecture, construction and additional engineering disciplines.

The collective 240+ years experience within EDT's Transportation Group of licensed professionals translates to 50 years in road design, 20 years in hydraulics analysis, 60 years in bridge and structural design and 80 years construction and project management. This includes successful work for six different state departments of transportation (DOT) programs.

Throughout its 25 year existence, EDT has consistently delivered quality solutions from conception to design-build-finance to leaseback. Our performance, coupled with our values and combined with an expert team of over 100 professionals, have resulted in a high percentage of repeat clients who continuing to entrust EDT with their projects.
