Unmanned Aerial Vehicles (UAV)/Drone Services

Anne Arundel County - Drone Assessment

EDT's Drone Technology involves inspection of structures, site survey and construction monitoring. Advantages of UAV/Drone services with EDT include life safety, cost savings, time savings and data accuracy.

Engineering Design Technologies (EDT) uses DJI Phantom 4 Drones, one of the most advanced commercial drones available with 'Skycatch,' an end-to-end solution for generating 2D and 3D data products from data captured by our drone. Skycatch has all of the tools needed to successfully capture, process and utilize data to make actionable decisions and to share that data. Our pilots possess the FAA Part 107 Remote Pilot License.

Our experts work together to make on-site data collection easier. Data collected during technical surveys is processed and analyzed for incorporation into technical drawings or plans, in accordance with the Client's needs.
